Summary of webinar

Comprehensive Treatment Planning in Early Psychosis through the Lens of Occupational Therapy

My hope is to continue to grow one of the greatest strengths of the EASA model, working as a transdisciplinary team while incorporating the roles within the team. As a part of this EASA community we can build understanding to help individual meet their functional goals, improve confidence, and carryover of this knowledge, for ongoing successful meaningful occupation in the years to come. This two-hour webinar is an introduction to the main elements of occupational therapy and is in support of teams that do not have an occupational therapist or would like to further the knowledge of the OT role for teams that do. These can be seen in the EASA guidelines section 11.4.

The focus will be on what assessments can EASA team members utilize to support improvements in Activities of Daily Living (ADLs), Sensory Processing, Cognition (including executive functioning), and Environmental Accommodations that can be made to support these performance patterns and skills.
